

FarmFeeder

The NextGenRoto FarmFeeder is a clever concept. When you invest in a product that allows you to reduce wastage of precious hay from animal defecation, spreading, trampling and weather damage, and also reduces your labour and time costs, you'll find the FarmFeeder is an excellent return on investment.

The FarmFeeder minimises over-grazing and pasture stress, and your hay will stay fresher, cleaner and light due to good air-flow. Clean-up is also reduced as animals can completely empty the feeder.

The FarmFeeder reduces hay damage in all year-round weather conditions and has a low wind resistance for additional protection. Plus, the internal lip can be secured to the ground using four 10 mm pegs*, whilst the internal tray can keep hay from direct contact with the ground.

This product will be useful year after year, and comes with a 5 year Manufacturer's Repair or Replacement Warranty, for your peace of mind.

The FarmFeeder is available in 3 different window feeding sizes, which have been designed according to individual animal sizes such as sheep, alpacas, goats, horses and cattle.

You'll be able to easily manoeuvre the FarmFeeder over round bales of hay with weights of 55 kgs (for sheep), 80 kgs (for horses), 100 kgs (for cattle).

- Built to last, using UV stabilised food grade polyethylene. BPA free.
- Designed to withstand Australia's harsh weather conditions.
- 100% recyclable.
- A smooth exterior with no sharp edges or metal fragments to protect your animals.
