

# El Niño is predicted in 2023 – say authorities

## El Niño in Australia

Did you know that Australia's weather is influenced by many climate drivers. El Niño and La Niña have perhaps the strongest influence on year-to-year climate variability in Australia. The Bureau of meteorology El Niño Alert continues, with El Niño development considered likely in the coming weeks as indicated in their meter.

### El Niño typically means:

- Reduced rainfall
- Warmer temperatures
- Shift in temperature extremes
- Increased frost risk
- Reduced tropical cyclone numbers
- Later monsoon onset
- Increased fire danger in southeast Australia
- Decreased alpine snow depths

El Niño brings a hotter, drier climate and potentially drought. The heartbreak of losing new, or established plants to the elements is painful. Here at NextGenRoto we provide solutions to help you prepare now while we're still receiving rainfall. But leave the preparation to later when drought hits will be too late and your precious plants and gardens may not survive El Niño

### Landscaping and Water Management

- One crucial aspect of preparing for El Niño is optimizing landscaping and water management. Now is the time to implement water-saving measures. These measures can help conserve water resources and minimise the impact of potential water restrictions that may accompany a dry spell.

### Rainwater Harvesting

- While El Niño brings the potential for reduced rainfall, it is wise to take advantage of any rainfall that does occur. By installing water tanks allows you to collect and store rainwater for later use. This can help supplement water supplies for gardening, washing cars, or other non-potable uses, even during drier periods.

As Australia braces for the potential impacts of El Niño, it's critical to start preparing to safeguard your plants and gardens against the potential challenges that lie ahead.

By taking proactive steps now such as optimising water usage, implementing rainwater harvesting systems, protecting against heat, and being prepared for fire emergencies, can enhance the resilience of your home.

NextGenRoto have developed specialised products that will assist you. Not only the manufacturing of round and slimline water tanks we also have our AquaSeat and Upcycled Garden Planter/Wicking Beds.

## Now is the time to start saving your garden!
